Thibault Casteleyn

Senior Software Engineer · Event-driven systems · Go & Kubernetes
Ghent, East Flanders, Belgium

Summary

Software engineer with more than a decade in the Benelux tech scene, from first-line support to owning backend platforms for connected hardware and open-source developer tools. I care about clean boundaries in code and in teams, and I have a track record of making event-driven systems observable, affordable, and easy to reason about. Currently a senior software engineer at Dovane, building Go services that run on Kubernetes in multiple clouds.

Experience

Dovane

Senior Software Engineer
July 2024 - Present (2 years 3 months)
Ghent, Belgium

- Directing backend architecture of an open-source developer platform, emphasizing event-driven patterns and cloud-native operations.
- Redesigned core APIs serving 25,000+ weekly active developers.
 - Migrated from a monolith to 12 event-aligned microservices with an outbox pattern.
 - Lowered p95 API latency by 60% through PostgreSQL query tuning and caching.

Cyrel

Backend Engineer
August 2021 - June 2024 (2 years 11 months)
Brussels, Belgium

Designed event-driven microservices for industrial IoT telemetry at a

company digital division.

- Created a Kafka ingestion pipeline handling 1.2M messages per minute with at-least-once delivery.
- Reduced cloud spend by 32% by optimizing Kubernetes workloads and using spot capacity.
- Mentored two engineers to senior positions, establishing an internal architecture review group.

Braveng

Full Stack Developer

November 2019 - July 2021 (1 year 9 months)

Antwerp, Belgium

Built a real-time logistics dashboard and API across the full stack with React, Node.js, and GraphQL.

- Delivered a dashboard adopted by 300+ dispatchers in less than 8 months.
- Reduced average GraphQL payload size by 40%, improving mobile loading times.
- Set up Playwright end-to-end tests, catching 35% more regressions before production.

Atelicos

4 years 2 months

Software Engineer

September 2017 - October 2019 (2 years 2 months)

Ghent, Belgium

Owned backend services in a Ruby on Rails monolith and helped modernize the frontend with TypeScript.

- Refactored 5 legacy modules into isolated services while maintaining 99.9% uptime.
- Cut release pipeline time by 70% by introducing Docker Compose and CI parallelization.
- Improved test coverage from 23% to 68% by pairing and promoting test-first practices.

Technical Support Engineer

September 2015 - August 2017 (2 years)

Ghent, Belgium

Acted as the primary technical contact for enterprise customers, solving complex issues and translating user feedback into engineering tickets.

- Reduced median ticket resolution time from 8 hours to 2.5 hours by introducing a shared debugging playbook.
- Compiled SQL reports for 40+ enterprise accounts, leading to a 20% drop in billing query volume.
- Logged and reproduced 130+ customer-reported bugs, 4 of which became high-severity fixes.

Education

Soderberg University College

Professional Bachelor in Information Technology, Applied Computer Science · (2012 - 2015)
